

User Documentation

Draft: 1.0

Product: Hyperbolic Graph

Installation: Our product will be downloadable from the Tanzle/zSpace website. It will require a zSpace monitor to get the full effect of the 3D, although we have the potential to provide a version of our program that will run without the monitor.

Tutorial: Running our application will be as easy as double clicking on an executable. A window will be brought up containing a pre-generated hyperbolic graph consisting of many nodes. The nodes will showcase the different attribute visualizations that we have implemented and will be moveable. If using a zSpace monitor, selecting nodes with the stylist will allow the user to manipulate their positions in 3-dimensional space. If using a normal monitor, selecting nodes with the mouse will provide the same functionality.
